**Largo knows a lot about cleaning over the road vehicles. In fact, we have over 40 years experience in cleaning them, with the safest, easiest, most economical vehicle cleaning system ever made. You too, can clean your trucks, vans, and buses, in half the time and at half the cost with our system over conventional hot water wash units. Whether your Trucks are painted, FRP, Stainless or Polished, we know how to clean them right. Whether you are a truck owner or a fleet owner, you recognize the energy saving advantages of cold water and know the labor economy of “no brushing”. Clean Trucks protect your image, prevent vehicle deterioration and keep those highway folks looking at the dirty trucks instead of yours.**

**A lot of truck owners talk about two step cleaning of their trucks, vans, trailers, feed haulers, livestock haulers, commercial buses, reefers, and tankers. They pretty much have the same idea and mind set on how to do it. Buy a hot water washer, add an acid injector to it to apply brightener, and adjust the soap valve until it looks like its cleaning good. You may vary a little on this type of application, but more than likely that's how you are washing your vehicles.**

**We also manufacture hot water pressure washers and a lot of our units go into the trucking industry to wash trucks. But absolutely nothing can clean a truck better than a Largo Two Step Machine using cold water with proven, safe, economical, and biodegradable Largo Detergents. Hot Water Machines average 2 1/2 gallons of diesel per hour. \$\$ You do the math.**

**One man. One Machine.....**

**Cold Water.....**

**No Brushing.....**

**20 Minutes .....**

**Clean Truck .....**

**There is one system that is designed to safely clean and brighten your truck or fleet without damage to glass, chrome, or polished aluminum surfaces. It's easy, safe and economical to use. The operator does not control the detergent mixture and you don't need hot water to get your truck clean.**
